

IN THE CLAIMS:

Please amend claims 1-2, 6-8, 12, 19-37 and add new claims 39-51 as set forth below.

1. (Currently Amended) A method, comprising:

receiving ~~a~~ at least one registration request for registration of a user ~~relating requesting to a subscriber a service~~ in a network entity in a communication system, said service identified by the network entity as belonging to a subscription permitting the user to access the service;

providing the network entity with control information indicating at least one limitation on simultaneous registrations ~~by the subscriber or the user;~~ users belonging to the same subscription ~~with respect to,~~ said control information indicating a restriction on a the number of users or addresses that can be simultaneously registered; and

controlling the registration based on the control information.

2. (Currently Amended) The method according to claim 1, further comprising:

determining that ~~the subscriber comprises at least one other_ user~~ belongs to the same subscription.

3. (Previously Presented) The method according to claim 1, further comprising:

checking whether at least one of said at least one limitation on simultaneous registrations would be infringed by allowing the registration.

4. (Previously Presented) The method according to claim 3, further comprising:

denying the registration when the checking shows that at least one of said at least one limitation regarding the simultaneous registrations would be infringed by allowing the registration.

5. (Previously Presented) The method according to claim 3, further comprising:

allowing the registration request when the checking shows that none of the at least one limitation on simultaneous registrations would be infringed by allowing the registration.

6. (Currently Amended) The method according to claim 1, further comprising:
indicating with the control information a number of the simultaneous user registrations allowed for the ~~subscriber~~ subscription.

7. (Currently Amended) The method according to claim 6, further comprising:
indicating with the control information a maximum number of the simultaneous
user registrations allowed for the ~~subscriber~~ subscription.

8. (Currently Amended) The method according to claim 1, further comprising:
indicating with the control information a limitation on a service type allowed for
the simultaneous user registrations for the ~~subscriber~~ subscription.

9. (Previously Presented) The method according to claim 1, further
comprising:
storing the control information in a user information storage entity.

10. (Previously Presented) The method according to claim 9, wherein said
storing comprises storing the control information in a home subscriber server.

11. (Previously Presented) The method according to claim 3, wherein the
checking comprises checking in a user information storage entity.

12. (Currently Amended) The method according to claims 9, further
comprising:

sending a request for user subscriber information from said network entity to the user information storage entity.

13. (Previously Presented) The method according to claim 9, wherein the providing comprises providing the control information from the user information storage entity to said network entity.

14. (Previously Presented) The method according to claim 3, wherein the checking comprises checking in the network entity.

15. (Previously Presented) The method according to claim 1, wherein said receiving comprises receiving the registration request in at least one of a serving controller, an interrogating controller, or an entity of an internet protocol multimedia core network subsystem.

16. (Previously Presented) The method according to claim 15, wherein the receiving comprises receiving the registration request in the serving controller, and wherein the serving controller comprises a serving call session control function.

17. (Previously Presented) The method according to claim 15, wherein said receiving comprises receiving the registration request in the interrogating controller, and

wherein the interrogating controller comprises an interrogating call session control function.

18. (Previously Presented) The method according to claim 1, further comprising:

counting the simultaneous registrations of the ~~subscriber~~ subscribed users.

19. (Currently Amended) A ~~communication~~ system, comprising:

a network entity configured to receive ~~requests~~ at least one request for registration of ~~users relating to subscribers~~ a user requesting a service in a network entity, said service identified by the network entity as belonging to a subscription permitting the user to access the service;

a providing unit configured to provide the network entity with control information indicating at least one limitation on simultaneous registrations by ~~the subscribers, with respect to the~~ users belonging to the same subscription, said control information indicating a restriction on a number of users or addresses that can be simultaneously registered; and

a controlling unit configured to control the registration of ~~a user relating to a subscriber~~ based on the control information.

20. (Currently Amended) The ~~communication~~ system according to claim 19, further comprising:

a checking unit configured to check whether at least one of said at least one limitation on simultaneous registrations by the ~~subscriber~~ users would be infringed by allowing the registration.

21. (Currently Amended) The ~~communication~~ system according to claim 20, wherein the network entity comprises the checking unit.

22. (Currently Amended) The ~~communication~~ system according to claim 19, wherein the network entity comprises at least one of a serving controller, an interrogating controller, or an entity of an internet protocol multimedia core network subsystem.

23. (Currently Amended) The ~~communication~~ system according to claim 22, wherein the serving controller comprises a serving call session control function.

24. (Currently Amended) The ~~communication~~ system according to claim 23, wherein the interrogating controller comprises an interrogating call session control function.

25. (Currently Amended) The ~~communication~~ system according to claim 19, further comprising:

a storing unit configured to store the control information associated with at least one of said at least one limitation regarding the simultaneous registrations ~~allowed for subscribers of users~~.

26. (Currently Amended) The ~~communication~~ system according to claim 19, further comprising:

a user information storage entity.

27. (Currently Amended) The ~~communication~~ system according to claim 26, wherein the user information storage entity comprises a home subscriber server.

28. (Currently Amended) The ~~communication~~ system according to claim 20, wherein a user information storage entity comprises the checking unit.

29. (Currently Amended) The ~~communication~~ system according to claim 25, wherein a user information storage entity comprises the storing unit.

30. (Currently Amended) The ~~communication~~ system according to claim 25, wherein a serving controller comprises the storing unit.

31. (Currently Amended) ~~The communication system~~ according to claim 19, wherein the controlling unit is configured to allow or deny the registration based on the control information.

32. (Currently Amended) ~~A network entity~~ An apparatus, comprising:
receiving means for receiving requests at least one registration request for registration of users relating to subscribers a user requesting a service, said service being identified as belonging to a subscription permitting the user to access the service;
receiving control means for receiving control information indicating at least one limitation on simultaneous registrations by the subscribers, with respect to the users belonging to the same subscription. said control information indicating a restriction on a number of users that can be simultaneously registered ~~number of users or addresses that can be registered~~; and
controlling means for controlling the registration of a user relating to a subscriber based on the control information.

33. (Currently Amended) ~~The network entity~~ apparatus according to claim 32, further comprising:

checking means ~~configured to check~~ for checking whether at least one of said at least one limitation on simultaneous registrations by the ~~subscriber~~ users would be infringed by allowing the registration.

34. (Currently Amended) The ~~network entity~~ apparatus according to claim 32, wherein the ~~network entity~~ apparatus comprises at least one of a serving controller means, ~~an~~ an interrogating controller means, or ~~an entity of an~~ an internet protocol multimedia core network subsystem means.

35. (Currently Amended) The ~~network entity~~ apparatus according to claim 34, wherein the serving controller means is ~~a~~ for providing a serving call session control function.

36. (Currently Amended) The ~~network entity~~ apparatus according to claim 34, wherein the interrogating controller means is for providing an interrogating call session control function.

37. (Currently Amended) The ~~network entity~~ apparatus according to claim 32, further comprising:

counting means configured to count the simultaneous registrations of the subscriber.

38. (Previously Presented) The method according to claim 1, further comprising:

indicating with the control information at least one limitation on simultaneous registrations by the subscriber or user in relation to one network.

39. (New) An apparatus, comprising:

a receiver configured to receive at least one registration request for registration of a user requesting a service in a network entity, said service identified by the network entity as belonging to a subscription permitting the user to access the service, and

further configured to receive control information indicating at least one limitation on simultaneous registrations by users belonging to the same subscription said control information indicating a restriction on a number of users that can be simultaneously registered; and

a controller configured to control the registration based on the control information.

40. (New) The apparatus according to claim 39, further comprising:

a checker configured to check whether at least one of said at least one limitation on simultaneous registrations by the users would be infringed by allowing the registration.

41. (New) The apparatus according to claim 39, wherein the apparatus comprises at least one of a serving controller, an interrogating controller, or an entity of an internet protocol multimedia core network subsystem.

42. (New) The apparatus according to claim 41, wherein the serving controller is a serving call session control function.

43. (New) The apparatus according to claim 41, wherein the interrogating controller is an interrogating call session control function.

44. (New) The apparatus according to claim 39, further comprising:
a counting unit configured to count the simultaneous registrations of the users.

45. (New) The apparatus of claim 39, wherein contact information is assigned to the individual users to represent a network address of the corresponding user equipment used to register with the network entity.

46. (New) The apparatus of claim 39, wherein a plurality of users are registered to access at least one service under a single subscription registered with the network entity.

46. (New) The apparatus of claim 39, wherein a subscriber is registered with the network entity as being subscribed to a plurality of subscriptions for services.

47. (New) The apparatus of claim 39, wherein at least one private user identity is registered with the network entity as representing a subscriber of a plurality of subscriptions for services.

48. (New) The apparatus of claim 39, wherein a public user identity is used to represent a plurality of private user identities.

49. (New) The apparatus of claim 39, wherein a private user identity is used to represent a plurality of public user identities.

50. (New) The apparatus of claim 39, wherein a single public user identity is used to represent a plurality of users operating a corresponding plurality of user equipments which are simultaneously registered with the network entity under a single subscription registered with the network entity as the single public user identity.

51. (New) The apparatus of claim 1, wherein the registration is controlled based on contact information assigned to the individual users
